

RISHI RANJAN

Software Engineer | Generative AI | Agentic AI | RAG Pipelines | Full-Stack
Delhi, India | +91 8789435450 | rishiranjana1604@gmail.com | GitHub | LinkedIn

EDUCATION

B.Tech, Computer Science — Bihar Engineering University, Patna 2019 – 2023 | CGPA: 7.89 / 10.0

ACHIEVEMENTS & AWARDS

Achiever of the Month — Monocept Consulting, Gurugram March 2026

Won the monthly award at Monocept for shipping two major AI features that directly improved client outcomes — voted by the leadership team.

WORK EXPERIENCE

Software Engineer — AI & Full-Stack — Monocept Consulting, Gurugram Apr 2024 – Present

- Built a Medical RAG Chatbot from scratch using LangChain, Groq, and Pinecone — it answers clinical questions by pulling from a vector database rather than hallucinating, which was the core problem the client needed solved.
- Designed an AI agent that autonomously searches clinical databases, decides which tools to call, handles failures gracefully, and explains its reasoning — built on FastAPI, Pydantic, and LangChain with retry logic for edge cases.
- Optimised Pinecone vector search with fine-tuned Sentence Transformer embeddings; a relatively small change that noticeably improved how relevant the chatbot responses felt to end users.
- Led both insurance products end to end — the React/Redux mRec recruitment platform for Axis Max Life from zero to launch, and fixed the state management issues on the ABHI mobile app (Aditya Birla) that were behind 20% of crashes.
- Built out a proper Jest test suite that brought accuracy up to a consistent 70% and added regression coverage so new AI feature releases didn't silently break existing behaviour.

KEY PROJECTS

Autonomous Medical Agent | FastAPI · LangChain · Pinecone · OpenAI · Pydantic 2024–25

- An agent that figures out which database to query, retrieves the right context, and synthesises a grounded answer step by step — with full observability baked in from day one so debugging was actually possible in production.

mRec — Insurance Recruitment Platform | React · Redux · Node.js · REST APIs 2024

- Greenfield project for Axis Max Life Insurance — designed the full frontend component architecture with reusability in mind, coordinated with backend, and shipped to production with no post-launch regressions.

TECHNICAL SKILLS

Generative AI & Agentic AI: LangChain, RAG Pipelines, Tool-Use, Function Calling, Agentic Workflows, Context Engineering, Prompt Engineering, Fallback Logic

LLM APIs: OpenAI, Groq, Anthropic Claude, Hugging Face, Ollama

Vector DB & Search: Pinecone, Sentence Transformers, FAISS, Semantic Search, Embedding Services

Backend & APIs: Python, FastAPI, Pydantic, Java, REST APIs, Docker

Frontend & Mobile: React, React Native, Redux, Tailwind CSS, HTML5, CSS3

Testing & DevOps: Jest, @testing-library, Regression Testing, Prompt Versioning, CI/CD, Git

CERTIFICATIONS

- Full Stack Generative AI & Agentic AI with Python — Udemy
- Full Stack Web Development Program — Masai School
- React Native - The Practical Guide — Udemy
- The Ultimate React Course: Next.js & Redux — Udemy
